

New GAmE- Humanity always struggled with wars. These wars almost wiped out humanity, yet they never ceased. When no humans were left, robots took the place of soldiers. Even on the brink of extinction, humanity continued to fight until only one city and its people remained standing. The wars stopped, and the robots were sent to the scrapyard. Humanity was to become the master of the world once again, or so it was believed...

AA-A Upon activation, you receive a system warning: only 20 minutes of power remaining. You stand up, and there are two paths in front of you.

AB- You walk and encounter a robot. The system alerts: enemy, eliminate.

AC- You walk and find yourself in a place filled with nearly shattered robots. As you look around for a power source, you see one of them still functioning. The surviving robot has no limbs left, but its reactor is still active.

AD- You fought, but due to the enemy's size and energy source advantage, you couldn't do anything. Your reactor was removed, and you reached the end of the road.

AE- You fled and walked a bit further, but the end of the road had already come. You collapsed to the ground, and the only thought in your mind was, so this is what human sorrow feels like.

AF- You left the scrapyard, now having enough energy to head towards the main charging station. You walked for a long time and heard a sound. A child's voice was calling for help.

AG- You continued on your path. After months, you reached the main charging station. The people there looked at you with astonished expressions, and some were clearly afraid. One of them pointed a gun and shot at you.

AH- You followed the sound and found a child being cornered by a pack of wolves. You quickly scared off the wolves and rescued the child. The child looked at you with astonished eyes and thanked you. He said his name was John and mentioned that if you wanted, his father, who is an engineer, could repair you.

AI- You managed to escape, but you were severely damaged and collapsed to the ground. You still couldn't understand what had happened. As you were shutting down, the only thought on your mind was to destroy the humans.

AJ- When you and John arrived at his father's workshop, his father was initially frightened and surprised. However, he soon began to speak with the excitement of an engineer. He said his name was Adam and that he hadn't seen others like you for a long time. He offered to repair you if you stayed with them for a while.

AK- You explained the situation to John and his father Adam and then left from there.

AL- Adam repaired you as much as possible and made your power source more efficient. Additionally, he connected your system to a global network, which helped you understand what was happening while you were offline.

AM- Days later, your system began showing strange parameters, but since it didn't hinder your operation, you didn't mind. About a month later, the repairs were completed, and it was time to leave. John and his father offered to come with you.

AN- You set off together. Along the way, John kept asking you questions: where you came from, why you were shut down, etc. One day, while talking, you mentioned the strange parameters you were receiving. After Adam checked them, a smile appeared on his face, and he said that these were fragments of emotions in your artificial intelligence.

AO- You left there alone. Now, it was just you, your system, and a long road ahead.

AP- When you arrived at the reactor with the charging station, Adam told the scientists there that you had developed the ability to feel emotions and that this would change the world. Although people were initially scared, thanks to you, a peaceful future lay ahead of them.
